I've added a new section to the features page in the hope that it will help developers with the use of the new logic-buffer accessor methods. This is definitely still a work in progress, so I'm sure there's room for improvement. There are already a few examples in the changelog and it would be great to see more examples. If you're interested, head over to the features page to read about the new methods. In this month's update, I have fixed the "Select all rows" mode. I've also made some minor layout improvements, fixed a few styling bugs, and made a few other improvements. Selecting the whole grid area in the query builder leads to an error, so now you can select only the displayed cells. I've also improved the layout of the "Overview" page by adding some new elements and improving the spacing and other minor things. You can read about the changes on the changelog page. This month's update includes some improvements to the "overview" section of the documentation, including a toggle for vertical scrolling, the introduction of a popup edit window, and a new system for presenting code samples. I also worked on the "Graph Data Visualization" module by making it a widget, added new options, and made some other improvements and fixes. You can read about the changes on the changelog page.
